**(54) Title:** WOUND TREATMENT APPARATUS EMPLOYING REDUCED PRESSURE**(57) Abstract**

Apparatus is described for stimulating healing of wounds, particularly burns, to the hands or feet. The apparatus comprises an envelope for receiving the affected part of the body. The envelope (12) comprises an air-tight cover which contains a porous pad (22, 24, 26) for covering the wound. Means are provided for connecting the interior of the envelope to a source of suction.
